## **Background:**

West Godavari District is situated on the west banks of river Godavari and is known as rice granary of Andhra Pradesh. It is bounded by Khammam District on the north, Krishna District on south west and Bay of Bengal on the south. The District has 3 different geographical zones the delta, the upland and Agency track. The Kolleru Lake, which connects the West Godavari District and Krishna District is an extensive shallow depression and is an ideal place for breeding. The Kolleru Lake is identified for development as tourism place.

Paddy is the principle crop of the District besides Sugarcane, Chillies, Coconut and Tobacco. The Upland area of the District is rich in substantial production of Mango, Cashew, Citrus and other fruits. In costal areas fish culture and prawn culture is developed in the last decade. Fish and prawn is exporting from the Districts to other countries and West Bengal and other north eastern states in the country.

## WATER RESOURCES:

The Godavari is the important river in this district. This river borders the entire eastern boundary of the district. At Vijjeswaram, the river breaks into two branches namely, the Gowthami Godavari and Vasista Godavari and flows towards the south of the district before falling into the Bay of Bengal near Antarvedi. The other minor rivers which feed the irrigation tanks in the upland areas are Tammileru, Yerrakalava, Byneru, Kovvada Kalava, Jalleru and Gunderu. The Kolleru lake is an extensive shallow depression created by a gradual rise in the level of the country on either side by alluvial deposits from the Godavari and Krishna Canals. The lake receives a large volume of drainage water of the surrounding deltaic area. It has an outlet to the sea through Upputeru.
